

# TERMA CONNECT

## REAL-TIME RADAR HEALTH AND SYSTEMS MONITORING

Terma Connect is a secure and intuitive digital service platform designed to monitor the operational and health status of systems in your radar portfolio - so you can stay focused on what truly matters: high operational efficiency.

Connect provides real-time monitoring and historical insights into radar performance, enabling you to oversee all connected assets from a single interface - without the need to access each radar individually.

By continuously monitoring your equipment, Terma Connect helps you detect issues before they impact operations and supports more effective preventive maintenance.

### Do You Struggle With...?

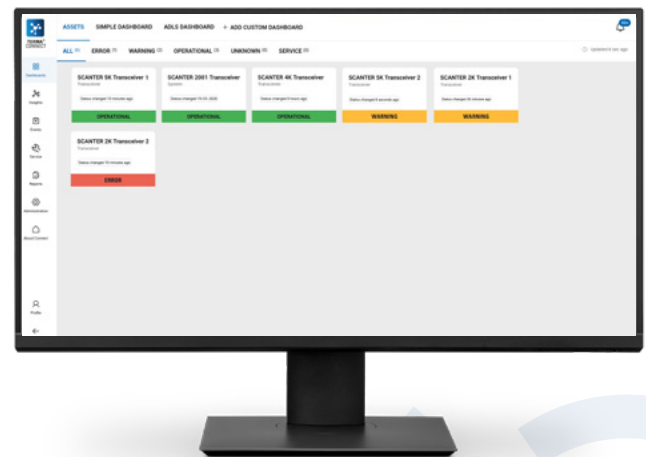

- Manual work and fragmented reporting? Terma Connect provides a centralized overview of the operational state of all systems in your portfolio with customizable dashboards.
- Troubleshooting deviations and failures? Terma Connect triggers alerts based on user-defined thresholds and supports accurate failure tracking through logged events.
- Planning maintenance and service efficiently? Convert events into structured service tasks with timelines, assignments, notes, and status tracking.
- Stakeholder communication and transparency? Historical insights and traceability make it easier to respond quickly and communicate clearly.

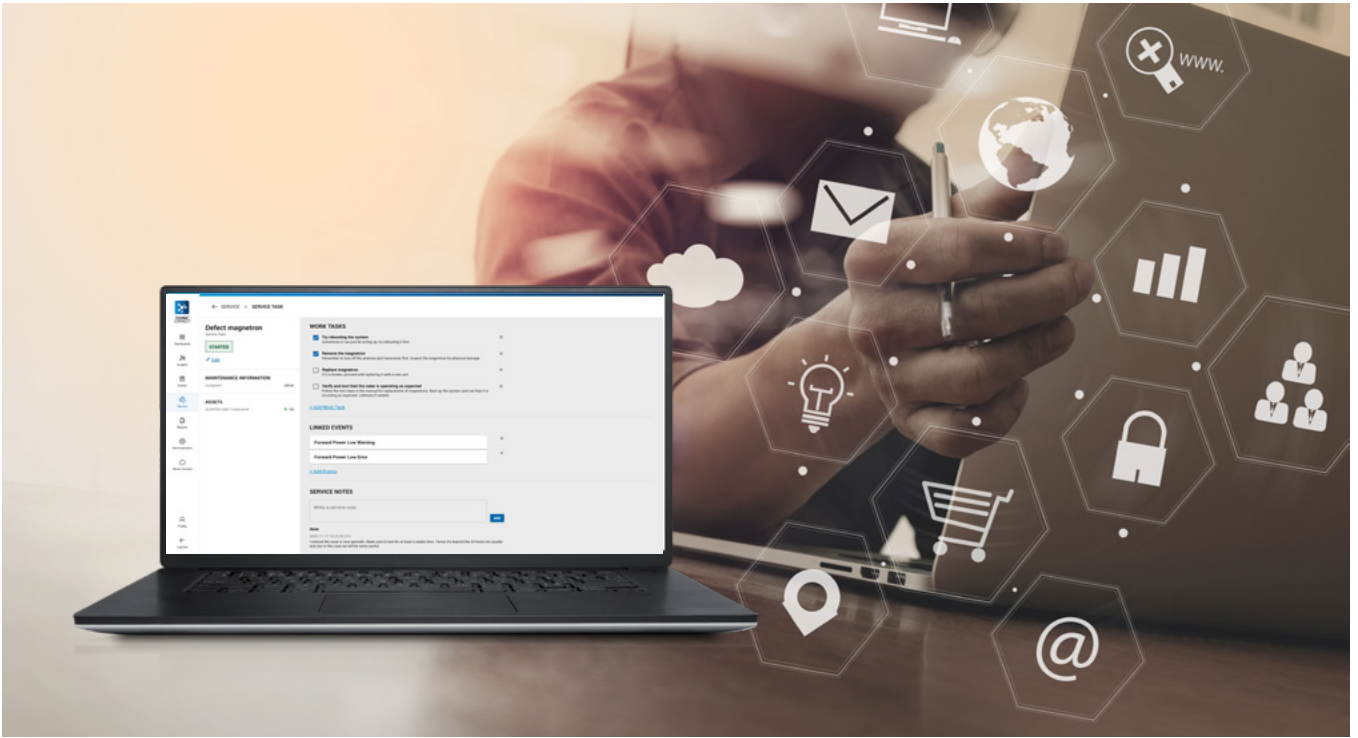

### Control, availability, and efficient radar operations

Terma Connect translates technical system details into clear, actionable insights.

### Key Benefits

- Detect issues before they escalate through real-time push notifications.
- Customize dashboards, parameter charts, and system state views to fit operational requirements.
- Plan preventive and corrective service directly from logged deviations and event history.
- Automate reporting with exportable summaries, customizable report templates and widgets utilizing historical data from your sensors.

### **Secure Platform Deployment**

Terma Connect is an on-premise solution, not dependent on cloud installations, and restricted to the customer organization's internal network (if configured as such). Information security risk management principles have been applied in the development of the platform.

### **Built to Scale with Your Mission**

Save time, reduce errors, and optimize operations through automation and centralized visibility.

Terma Connect is designed to enable easy and efficient setup with radars in the Terma SCANTER portfolio as well as supports integration with third party sensors.

Whether you manage coastal surveillance, airport radars, or critical infrastructure, Terma Connect scales with your needs and team.
